**DETAILED ACTION**

***Response to Amendment***

1. Claims 6, 10 and 19 have been amended, none of the claims have been deleted and no new claims have been added. Hence, claims 1-22 are pending in the application.
2. The objection to the disclosure as set forth in the previous Office Action dated January 25, 2005 has been overcome by applicant's amendments and is now withdrawn.
3. The objection to the specification as set forth in the previous Office Action dated January 25, 2005 has been overcome by applicant's amendments and is now withdrawn.
4. The objection to the claims as set forth in the previous Office Action dated January 25, 2005 has been overcome by applicant's amendments and is now withdrawn.
5. The 112, second paragraph, rejection to the claims as set forth in the previous Office Action dated January 25, 2005 has been overcome by applicant's amendments and is now withdrawn.
6. Applicant's arguments are persuasive to the extent that the 103 rejection of EP 0659852 in view of EP 0509688 has been withdrawn. A new rejection is entered below.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshida et al. (US 5,507,865) in view of Moffatt et al. (US 5,106,416).

Yoshida et al. teach an aqueous ink jet ink composition comprising 0.1-20% by weight of a water-soluble dye, preferably a black dye, 0.01-20% by weight of an amino acid such as arginine, lysine, histidine, ornithine and derivatives thereof and water. Yoshida et al. further teach that additives such as surfactants may be added for their normal functions. See col. 2, lines 25-55, dyes (A), (B) and (C), col. 3, lines 50-65, col. 4, lines 32-58, examples 1-3, Table 2 and claims 1-6. Yoshida et al. fails to specifically teach the addition of a amphoteric (i.e. zwitterionic) surfactant as claimed by applicants.

Moffatt et al. teach an ink jet ink composition containing a zwitterionic surfactant such as N,N-dimethyl-N-dodecyl amine oxide, N,N-dimethyl-N-tetradecyl amine oxide, N,N-dimethyl-N-hexadecyl amine oxide, N,N-dimethyl-N-octadecyl amine oxide, N,N-dimethyl-N-(Z-9-octadecenyl)-N-amine oxide, N- dodecyl -N,N-dimethyl glycine and sulfobetaines wherein the surfactant improves the color bleed between inks. See col. 2, lines 33-36, col. 3, lines 45-50, col. 4, lines 20-64, col. 5, lines 12-20 and claims 1-3, 6 and 7.

Therefore, it would have been obvious to one having ordinary skill in the art to modify the aqueous ink jet ink of Yoshida et al. by adding the zwitterionic surfactant of Moffatt et al. in order to improve the color bleed of the aqueous ink when printed next to another ink composition.

### ***Response to Arguments***

9. Applicant's arguments with respect to claims 1-22 have been considered but are moot in view of the new ground(s) of rejection.
